

HALOTHERAPY

The project aims to create a salt room in the kindergartens.

The idea stems from the need to prevent the onset of viral infections of the respiratory system, so as to guarantee a better quality of life for children who attend kindergartens, at the same time, guarantee a peaceful family organization and management, and finally guarantee new employment opportunities even in the most disadvantaged categories.

Halotherapy is a completely natural treatment based on the imitation of the microclimate present in the real salt mines in central Europe. It is possible to reproduce these environments in which halotreatment is practiced, in reception facilities such as hotels, gyms, wellness centers, playrooms and nurseries.

This is a treatment that can be practiced at any age, even babies as young as a few months can receive halotherapy. Children are the most exposed to seasonal viruses, the benefits for them are many.

Offering children in nursery schools an additional service of this type, alongside the recreational-educational one, allows them to stand out on the market and also become a specialized.
